AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A catalyst precursor composition represented by one or more:

$$R-X$$
 T
 $Y-R'$
 Z_nML_n

wherein T is a bridging group containing 2 or more bridging atoms;

M is <u>an atom</u> a metallic element selected from Groups 1 to 15, 3 to 13 and the Lanthanide series of the Periodic Table of the Elements,

Z is a coordination ligand;

each L is a monovalent, bivalent, or trivalent anionic ligand;

n is an integer from 1 to 6;

m is an integer from 1 to 3;

X and Y are heteroatoms each independently selected from is nitrogen[[,]] oxygen, sulfur, and or phosphorus;

Y is a heteroatom and is selected from the group consisting of nitrogen, phosphorus, oxygen, and sulfur;

R is a non-bulky substituent that has relatively low steric hindrance with respect to X; and

R' is a bulky substituent that is sterically hindering with respect to Y.

2. (Original) The catalyst precursor composition of claim 1, wherein T contains 2 or 3 bridging atoms and from 2 to 50 non-hydrogen atoms, at least one of which is a Group 14 atom.

- 3. (Original) The catalyst precursor composition of claim 1, wherein T contains at least two primary alkyl groups on the atom adjacent to Y.
- 4. (Currently Amended) The catalyst precursor composition of claim 1, wherein T contains a dimethyl group on the atom adjacent to Y.
- 5. (Currently Amended) The catalyst precursor composition of claim 1, wherein T is selected from the group consisting of:

Application No. 10/023,255 Docket No. 2001U012.US Reply to Office Action Dated 10/06/2003

wherein X and Y are provided for convenience and are not part of the bridging group.

- 6. (Currently Amended) The catalyst precursor <u>composition</u> of claim 1, wherein Z is selected from at least one of triphenylphosphine, <u>a</u> tris(C₁-C₆ alkyl) phosphine, <u>a</u> tricycloalkyl phosphine, <u>a</u> diphenyl alkyl phosphine, <u>a</u> dialkyl phenyl phosphine, <u>a</u> trialkylamine, <u>an</u> arylamine, a substituted or unsubstituted C₂ to C₂₀ alkene, an ester group, a C₁ to C₄ alkoxy group, an amine group, <u>a</u> carboxylic acid, <u>a</u> and di(C₁ to C₃) alkyl ether, an an η⁴-diene, tetrahydrofuran, and a nitrile.
- 7. (Currently Amended) The catalyst precursor <u>composition</u> of claim 1, wherein each L is an anionic ligand independently selected from those containing <u>contains</u> from 1 to 50 non-hydrogen atoms and <u>is</u> selected from the group <u>comprised consisting</u> of halogen containing groups; hydrogen; alkyl; aryl; alkenyl; alkylaryl; arylalkyl; hydrocarboxy; amides, phosphides; sulfides; silylalkyls; diketones; borohydrides; and carboxyla[[n]]tes.
- 8. (Currently Amended) The catalyst precursor <u>composition</u> of claim 1, wherein each L is an anionic ligand independently selected from those containing <u>contains</u> from 1 to 20 non-hydrogen atoms and selected from <u>the group consisting of</u> the alkyl, arylalkyl, and halogens containing groups.

- 9. (Currently Amended) The catalyst precursor <u>composition</u> of claim 1, wherein n is an integer from 1 to 4.
- 10. (Currently Amended) The catalyst precursor <u>composition</u> of claim 1, wherein both X and Y are nitrogen.
- 11. (Currently Amended) The catalyst precursor <u>composition</u> of claim 1, wherein R is a non-bulky substituent selected from straight <u>chain alkyl group and or a branched chain alkyl group[[s]].</u>
- 12. (Currently Amended) The catalyst precursor <u>composition</u> of claim 11, wherein R is a C₁ to C₁₀ straight chain alkyl group.
- 13. (Currently Amended) The catalyst precursor <u>composition</u> of claim 1, wherein R' contains from 3 to 50 non-hydrogen atoms and <u>be</u> <u>is</u> selected from <u>the group consisting of</u> alkyl, alkenyl, cycloalkyl, heterocyclic, alkylaryl, arylalkyl, polymeric, and inorganic ring moieties.
- 14. (Currently Amended) The catalyst precursor <u>composition</u> of claim 13, wherein R' contains from 4 to 20 non-hydrogen atoms.
- 15. (Currently Amended) The catalyst precursor <u>composition</u> of claim [[16]] <u>13</u>, wherein the R' substituent has one or more of its carbon or hydrogen positions substituted with an element selected from Groups 14 to 17 of the Periodic Table of the Elements, other than carbon.
- 16. (Currently Amended) The catalyst precursor <u>composition</u> of claim 1, having a formula selected from:

wherein T is a bridging group containing 2 or more bridging atoms.

17. (Currently Amended) The catalyst precursor <u>composition</u> of claim 1, which is represented by a formula selected from <u>the group consisting of</u>:

$$H_3C(H_2C)_6CH_2-N$$
 H_2C
 CI

and

$$H_3C(H_2C)_6CH_2-N$$
 H_2C
 CI
 CI
 CI
 CI

$$H_3C(H_2C)_6CH_2-N$$
 CI
 CI
 CI
 CI
 CI

wherein T is a bridging group containing 2 or more bridging atoms.

- 18. (Currently Amended) The catalyst precursor <u>composition</u> of claim 1, wherein M is selected from Groups 3 to 7 of the Periodic Table of the Elements.
- 19-36. (Canceled).
- 37. (Currently Amended) A catalyst precursor selected from having the following general formula the group consisting of those represented by:

$$R-N$$
 M
 L_n
 $N-R'$

wherein T is a bridging group containing less than 10 non-hydrogen atoms, at least 2 of which are linking atoms with respect to the nitrogen atoms and wherein at least one of the bridging atoms is a carbon atom;

M is selected from Hf or and Zr;

each L is a ligand containing from about 1 to 20 non-hydrogen atoms and is selected from the group consisting of alkyl, arylalkyl <u>alkyl halide</u>, <u>arylalkyl halide</u>, <u>and halogen halogen containing groups</u>;

n is an integer from 1 to 3;

R is a non-bulky substituent selected from the \underline{a} C_1 to C_{10} straight chain alkyl group[[s]]; and

- R' is a bulky substituent that is sterically hindering with respect to which it is bonded and contains 4 to 20 non-hydrogen atoms and is selected from the group consisting of alkyl, alkenyl, cycloalkyl, heterocyclic, alkylaryl, and arylalkyl-groups.
- 38. (Currently Amended) The catalyst precursor composition of claim 37 wherein T contains at least two primary alkyl groups on the atom adjacent to Y.
- 39. (Currently Amended) The catalyst precursor composition of claim 37 wherein T contains a dimethyl group <u>on the atom</u> adjacent to the nitrogen group bonded to R'.
- 40. (Currently Amended) A catalyst composition for the polymerization of olefins, which said catalyst composition is the reaction product of an activator and a compound having the following structure:

$$R-N$$
 M
 L_n

wherein T is a bridging group containing less than 10 non-hydrogen atoms, at least 2 of which are linking atoms with respect to the nitrogen atoms and wherein at least one of the bridging atoms is a carbon atom;

M is selected from Hf or and Zr;

each L is a ligand containing from about 1 to 20 non-hydrogen atoms and is selected from the group consisting of alkyl, arylalkyl <u>alkyl halide</u>, <u>arylalkyl halide</u>, <u>and halogen halogen containing groups</u>;

R is a non-bulky substituent selected from the \underline{a} C₁ to C₁₀ straight chain alkyl groups; and

- R' is a bulky substituent that is sterically hindering with respect to which it is bonded and contains 4 to 20 non-hydrogen atoms and is selected from the group consisting of alkyl, alkenyl, cycloalkyl, heterocyclic, alkylaryl, and arylalkyl-groups.
- 41. (Currently Amended) The catalyst precursor composition of claim 40 wherein T contains a dimethyl group on the atom adjacent to nitrogen group bonded to R'.
